```

```

1 You win when you succeed in placing five pieces in a row vertically,
horizontally or diagonally.
2 Tap [start] to start a new game.
3 Tap [demo], the unit will demonstrate the game.
4 Tap [help] to get a clue for the next step.
5 Before you get started, you can tap [white] to select white side. However, the
black side has the priority to place the first chess piece.
6 Press [left] or [right] to move the cursor.
7 Press [space] or [enter] to place the chess piece.

```

END

```

1 Look for all the explosive mines in the minefield without striking any of them.
The game is over if you tap on a block with a mine.
2 Tap [start] to start a new game.
3 Tap [start] to set the level of difficulty, customize the board size and the
number of the mines select [custom], the following items will be shown.
Height: maximum 3 blocks.
Width: maximum 3 blocks.
Mines: maximum 9 mines (must less than the total blocks).
4 The timer will start at the moment the first block is tapped. If a figure shows
on the overmined block, it indicates the total number of the mines laid in
adjacent blocks.
5 If you are certain of the existence of mine under a block, tap 'flag/icon'
on the upper-right screen, then tap the block to mark it with the flag.
6 If you are uncertain whether there is a mine under the block, tap 'flag/icon',
then double tap the uncertain block to mark it with a question mark.

```

END
